TEACHING

Teaching Philosophy

My teaching philosophy can be summarized as follows:

- Prepare and stimulate students to acquire skills in critical thinking
- Going deeper and behind the exact meaning of theories
- Prepare and motivate students to link theoretical concepts with real-life problems
- Enhance the students' capabilities to use several references and depend heavily on library materials and databases
- Introduce case studies that help students enhance their logical thinking and problem-solving.
- Convince students that education is a continuous lifetime process
- Put students under pressure from exams and assignments that push them to excel in their inner skills. I believe this is necessary for their maturity and personality-building
- Build trust between the students and me and teach them that honesty is a moral rather than an attitude and good education is usually built on good ethics and values.
- Collaborating with my colleagues in curriculum development and the introduction of new/advanced ideas and teaching techniques
- Help students to acquire particular skills and values of community service and teach them that education is a significant determinant of economic development and fighting poverty

Courses Taught (Undergraduate Level; U Graduate Level; G)

Financial Management I (U & G)

Financial Management II (U)

Corporate Finance (G)

Banking Management (U & G)

Investment Management (U)

Special topics in Finance (U)

Investment and Portfolio Management (U & G)

Principals of Accounting (U)

Accounting for Partnership and Corporation (U)

May 2015 “Finance for non-Finance Management” Training program to Bel North East Africa Region Junior Management and Supervisory level as a part of “Management Development Program,” Cairo, Egypt.

COMMUNITY SERVICE AND ACTIVITIES

- I introduced MIU SMS (Stock Market Simulation). I am very proud that the simulation completed its 13th annual round successfully.
- It is an academic multitasking event that introduces and familiarizes students with the basics and dynamics of operations and technicalities of the Stock Market.
- It is worth noting that the interaction between students in this simulation promotes some fundamental social skills such as team-working, communication skills, negotiating abilities, and working under challenging deadlines.
- Community service is among the most important objectives of this simulation, where SMS invites school students to join, participate, and learn the stock market basics. This high-value-added objective contributes to helping new generations familiarize themselves with financial markets and institutions.

RESEARCH

Research Philosophy

My research philosophy can be summarized as follows:

- The literature review about a phenomenon must be critical and profound, including up-to-date knowledge, substantive theoretical contributions, and methodological and empirical findings. The quality of a literature review is the first step toward high-quality research.
- The data about a phenomenon should be gathered from reliable sources, analyzed deeply, and processed in a way that ensures the robustness and unbiasedness of empirical findings for high-quality research. On the one hand, what is known to be accurate guides the initial steps of the study? On the other hand, what is believed to be valid must be tested and assessed using various techniques and robustness tests.
- The empirical findings of any research must be read carefully, and their limitations must be highlighted. This opens the door for further research and contributions.

Research Focus

- My research focuses on Corporate Finance and Banking Management, specific transparency about financial decisions and banking management.
- My research findings and results appeared in several international journals: Applied Finance Letters, Journal of Modelling in Management, Investment Management and Financial Innovations, Journal of Economic and Administrative Sciences, Research in Finance, Advances in Quantitative Analysis of Finance and Accounting, Journal of Emerging Market Finance, and Journal of Finance and Bank Management. I am now in the process of building a research agenda in related areas.
